

* The Minimal Polynomial $\Rightarrow$

Let $A = [a_{ij}]_{n \times n}$

$$m_A(x) = a_0 + a_1x + \dots + a_{n-1}x^{n-1} + x^n \quad r \leq n$$

s.t. $m_A(A) = 0$

$$\Rightarrow a_0I + a_1A + \dots + a_{n-1}A^{n-1} + A^n = 0$$

$\nexists$ for any $p(x)$; $\deg p(x) < r$
 $p(A) \neq 0$

Then $m_A(x)$ is called the Minimal polynomial of A .

Observation $\Rightarrow$

L

If $\deg m_A(x) = 1$

$$\Leftrightarrow m_A(x) = x + a, \quad a \in F$$

$$\Leftrightarrow A + aI_n = 0$$

$$\Leftrightarrow A = -aI_n$$

$$\Rightarrow A \text{ is scalar} \rightarrow \text{Matrix order } n \times n$$

Ex if for any

$$f(x) = a_0 + a_1x + \dots + a_kx^k \in R[x]; F[x]$$

s.t. $f(A) = 0$

$$\Rightarrow m_A(x) \mid f(x)$$

$$\Rightarrow m_A(x) \mid c_A(x)$$

$$f(x) = m(x) \cdot q(x) + r(x)$$

$$f(A) = m(A) \cdot q(A) + r(A)$$
